

## Curious Minds, Creative Professionals

Students throughout Greece get informed about science, discovering the vital role Curiosity, Creativity, Critical Thinking and Problem-Solving play, as skills, in a professional career in science.

Executives of Merck Greece undertake the role of mentor, meeting online, via live sessions and asynchronous questions and answers, students of Secondary Education, having conversations regarding Biology, Pharmaceuticals, Chemistry, Medicine, Mathematics, Physics, etc. At the same time, they inspire and urge the new generation to develop the skills required not only for a career in science-related professions, but also for personal academic and professional growth.

With the assistance of technology, the mentors share their experiences and knowledge, in order for students to:

- Get informed about the science-related sectors, such as Biology, Pharmaceuticals, Chemistry, Medicine, Mathematics, Physics, etc.
- Get to know the career options of these sectors
- Get inspired to ask more questions in their everyday life in order to “reach” knowledge
- Realize that the power of questions forms the basis for the development of innovative ideas in professions,
- Realize that skills development is an urgent need, regardless of the professional sector they are interested in
- Develop an innovative and modern way of thinking, on which they will base their personal and professional growth.

The project is implemented with the support of Merck Greece.
