

Meet the STEM world

STEM Sciences (Science, Technology, Engineering, Mathematics) are introduced to students all over Greece via the project “Meet the STEM world”.

For the second year in a row, mentors from respective fields present and point out, simply and coherently, the meaning and value of the STEM sciences and professions, as well as their practical applications in modern societies. As a result, students become acquainted with these fields in an interactive and direct way, from theory all the way to application.

Moreover, having gained inspiration from the conversations with the mentors, students are offered the option of participating in the Vodafone Foundation Greece’s “Generation Next” contest, by applying what they learned in order to solve a problem of their local community.

The project “Meet the STEM world” is implemented with the support of the Vodafone Foundation Greece.
